- 1 [Session 2: secure Web services: Designing a distributed access control processor for network services on the Web](#) 10%

Reiner Kraft

Proceedings of the 2002 ACM workshop on XML security November 2002

The service oriented architecture (SOA) is gaining more momentum with the advent of network services on the Web. A programmable and machine accessible Web is the vision of many, and might represent a step towards the semantic Web. However, security is a crucial requirement for the serious usage and adoption of the Web services technology. This paper enumerates design goals for an access control model for Web services. It then introduces an abstract general model for Web services components, along ...

- 2 [Middleware for software leasing over the Internet](#) 4%

H.-A. Jacobsen , O. Günther

- 3 [Military applications: Security issues in high level architecture based distributed simulation](#) 1%

Asa Elkins , Jeffery W. Wilson , Denis Gracanin

Proceedings of the 33rd conference on Winter simulation December 2001

The United States Department of Defense (DoD) has, over the past several years, emphasized the need to employ simulation based acquisition (SBA) in engineering and development. Distributed simulation introduces an information assurance challenge and details of a simulation must be guarded from unauthorized access. The High Level Architecture (HLA) and its Run-Time Interface (RTI) do not define support of mandatory access controls (MACs) or discretionary access controls (DACs) required to provide ...

- 4 Business-to-business interactions: issues and enabling technologies 1%
4 B. Medjahed , B. Benatallah , A. Bouguettaya , A. H. H. Ngu , A. K. Elmagarmid
The VLDB Journal — The International Journal on Very Large Data Bases May 2003
Volume 12 Issue 1
Business-to-Business (B2B) technologies pre-date the Web. They have existed for at least as long as the Internet. B2B applications were among the first to take advantage of advances in computer networking. The Electronic Data Interchange (EDI) business standard is an illustration of such an early adoption of the advances in computer networking. The ubiquity and the affordability of the Web has made it possible for the masses of businesses to automate their B2B interactions. However, several issu ...

4 Marco Roccetti , Vittorio Ghini , Paola Salomoni , Alessandro Gambetti , Davide Melandri , Mirko Piaggese , Daniela Salsi
Proceedings of the 2002 ACM symposium on Applied computing March 2002
Developing enhanced wireless Internet applications is becoming one of the upcoming challenges for mobile radio networks operators. In this paper we introduce and discuss the general software architecture of a wireless Internet-based application we have designed and implemented to support the distribution of Mp3-based musical songs to UMTS devices. We have examined the effects that Internet traffic has on the performance of wireless UMTS networks, due to the distribution of Mp3 files by means of ...
